

# USING YOUR HEARTH CABINET DECORATIVE FIREPLACE

1. Hearth Cabinet is a UL Approved decorative replace. Although it produces heat, it is not to be used as a heater during cold seasons.\*

2. Make sure the room you place it in is well ventilated by a window or open doorway, or by ducts (grilles) that blow air into the room.

3. Please do not place large numbers of cartridges in storage for weeks or months prior to using them.\*\*

4. And lastly, rest assured that your cartridges are safe. They only burn for about 1.5 - 2 hours and produce very little CO (carbon monoxide) during that time period.

The Federal Occupational Safety and Health Administration allows a permissible exposure limit of 50 ppm average over an eight hour time period. Your cartridges produce much less than that.

See <http://www.epa.gov/iaq/co.html>.

\* HearthCabinet Decorative Single Sided Models meet UL Standard 1370 on Decorative Appliances.

\*\* NYC codes do not usually allow storage of more than 5 gallons of flammable material. Each case of eight 19-ounce (approximately) cartridges contains 152 ounces of gel, which is a little over one gallon. That means you can store up to four cases of cartridges. Do not store more than that. Check your local codes for current rules.
